Areola Pigmentation

AREOLA IN HARMONY - FOR MY NEW SENSE OF VITALITY

BEAUTY THAT LASTS

Medical Areola Pigmentation For a new sense of vitality

A beautiful breast represents femininity. After breast surgery, many women therefore lose self-confidence. This sensitive topic is a matter of the heart for us and led to the development of our own natural areola pigments.

AREOLA IN HARMONY

In recent years, medical pigmentation has found its place in medicine/surgery. Once the plastic surgeon has completed his work after breast surgery, amazing results can be achieved in areola drawing with medical pigmentation.

After breast surgery, a natural-looking areola is pigmented. The color tone is adjusted to the desired result. Through light shading, we achieve a natural effect of authenticity of the artificially recreated areola and thus help many women to gain new self-confidence and a better quality of life. Remaining unwanted scars can be treated and improved with the Derma SR dermaneedling technique.

Many women also choose to have the areola pigmented darker or larger for aesthetic reasons. The pigment shade is always individually matched to the skin or areola color. In our specialized institute for permanent make up we have a lot of experience and a profound education in the special field of areola pigmentation.

The treatment is also suitable after surgical interventions in the following medical specialties:

- Plastic surgery
- Orthodontic surgery
- Oncology/Radiology
- Dermatology
- Gynecology

Your safety is important to us! The Swiss Color® pigments and equipment used meet the high quality standards and hygiene control of the Swiss Federal Office of Public Health.

Application examples

Areola and mamilla are adjusted to the individual skin tone.

PMU-STYLIST:
Ingrid Bregenzer

The scar is concealed and is hardly visible.

Areola Pigmentation Reconstruction of the female breast

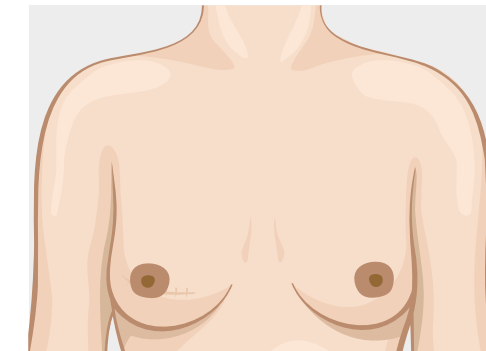

STAGE 1

Complete removal of the affected tissue by surgical intervention (mastectomy). Already during this operation measures are taken for breast reconstruction.

STAGE 2

Reconstruction of the breast with one's own tissue from the stomach, buttocks or back. The advantage over a prosthesis is the natural and lasting cosmetic result.

STAGE 3

Medical pigmentation of the mamilla by Swiss Color® specialists. Areola and mamilla are adapted in shape and color to your individual skin tone and aesthetic wishes and pigmented using 3D technology.

FURTHER INDICATIONS FOR MEDICAL PIGMENTATION

- After operations: Partial or total loss of eyebrows, lips
- After chemotherapies: Partial or total loss of brows/eyelashes
- Burns
- Scars after accidents
- Alopecia areata/totalis
- Lips: Scars due to herpes labialis
- Hair thickening
- Corrections of unwanted Permanent make up
- Corrections after gender reassignment
- Vitiligo

In a personal consultation we will be happy to answer all your questions and discuss the exact procedure of your treatment.
